

## F) Blended Learning and the Flipped Maths Class

*Stuart Welsh*

Blended learning involves some content being delivered online and some in a classroom. A flipped Maths class has learners watching online lectures in advance of class so they can spend the time in class working on problems. I have been running a flipped class with National 5 and Higher for 2 years. Hear why I believe this approach is so effective and how it can solve the challenges of pace, personalisation and split level classes. I will also explain the hardware and software you need to 'flip' your own class.
